- BC and IT DR Training, Testing and ongoing maintenance
- Alternate Site Selection and Implementation
- Crisis Management
- Emergency Management
- Pandemic Response Planning
- Strategic and Operational Risk Management
- Information Security Management
- IT Service Management and ITIL Planning

If you've ever been interested in knowing if your organisation is "recovery-ready"... then this is going to be the most exciting message you ever read.

Here's why.

IT failures, Power Outages, Flood and Storms, Pandemics, Lifeline Supplier failure; all of these incidents are on the increase and all of them can potentially bring your business to its knees. Have you asked yourself "are we recovery-ready?"

Imagine if you knew exactly what risks existed in your business, their potential impact, and you had a plan to respond to each of them. Would that be useful?

OpsCentre's Recovery Readiness Assessment tells you where you are exposed, the possible impacts, and what you can do about them. This cost-effective solution gives you the real answers that you need to know.

Here are six important things you will discover:

1. How would we continue to function in an extended building evacuation such as a power outage or flood in the basement?
2. Who are our most critical customers and how would we contact them?
3. What is our current IT Disaster Recovery capability? How long would it take to restore our most critical systems, applications and data?
4. Do we outsource critical business functions to third party organisations services? What if they were to fail, will we be impacted?
5. Do our staff know how to get out of our building safely, where to go, and how do we account for them?
6. In the event of a disaster, would we need to implement manual workarounds to cater for reduced staff numbers, loss of IT systems, or denial of access to our building?

We provide you with a recovery-readiness assessment, recommendations and an implementation plan, giving you peace of mind and a clear plan of action.
